

LINE MAINTENANCE SUPPORT STAND

F-35

LINE MAINTENANCE SUPPORT STAND

F-35

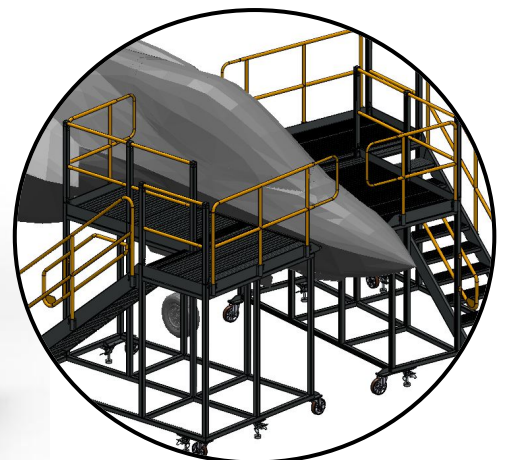

Our Line Maintenance Support Stand is the next evolution of maintenance working platforms designed specifically for F-35 line maintenance. Constructed with lightweight aluminum and equipped with non-slip material and rubber bumper edges, preventing damage to aircraft.

Line Maintenance Support Stand is ideal for easy and secure pilot ingress and egress from cockpit. Removable side railings allow easy maintenance involving large equipment or parts. Fixed design allows for optimal stability and security. High weight capacity of 300kg / m², a significant increase from legacy stands.

The stand features integrated dimmable LED lighting, providing effective illumination of shadowed areas underneath the aircraft and improving visibility during maintenance operations.

A molded grating storage deck is integrated into the lower section of the stand, providing convenient and accessible storage for aircraft parts, consumables, tools, and other maintenance equipment.

Integrated power and compressed-air reels are located on the upper deck, allowing technicians to easily bring both electrical power and compressed air directly to the work area when required. Multiple electrical outlets are also strategically positioned throughout the stand for convenient access during maintenance operations.
